

Table 3: SITC Aggregation Indicators

SITC aggregation indicators are provided on the control file for each commodity code to enable aggregations at SITC 4 and 5 digits to be directly compatible with data provided in OTS publications. The control file gives separate indicators for Intrastat Imports, Intrastat Exports, Customs Imports and Customs Exports, and within each, separate indicators for SITC 4 and 5 digits (sub- group and Item).

Indicators and the data element which should be published for each are shown below:

SITC AGG IND.	Country/ Port data		All countries Total	
	Q	V	Q	V
0*	/	/	/	/
1	-	-	/	/
2	-	-	-	/
3	-	-	-	-

Q = Quantities V = Value

For compatibility with the OTS:

/ = publish

- = do not publish

*Agg Ind 0 = no suppressed commodity codes within SITC, therefore aggregations will be complete.
